Personal Data

Nationality - Ghanaian

Language Proficiency - English

Education

2016

Bachelor of Science - Computer Science

University of Ghana - Accra, Ghana

Technical Skills

Web Development

Frontend

HTML, CSS

Vanilla Javascript

Frontend libraries

React JS

Backend

Node / Express JS

Vanilla PHP

Django

Desktop App Development

Electron JS

Database

MySQL

Basic knowledge in **React Native, Flutter, Python**

Graphic Design

Adobe Suite

Photoshop

Illustrator

After Effect

XD

Microsoft Suite

Word, Excel, PowerPoint

Personal Summary

I am a motivated software engineer eager to apply my technical and organisational skills in various environments to bring about productive solutions. Currently seeking opportunities to apply and expand my skills and portfolio while facilitating company growth

Projects

Desktop - App

Title - Restaurant App

This app basically enables a restaurant owner to set up a shop on the app, add administrators, users, food products, transact business on the application and also issue receipt to customers.

A video demo presentation of this application is on youtube.
The first section basically describes how you can set up the shop, add administrators, users and food products
https://youtu.be/s-rERFQUZx8

The second section describes how to use the application to perform business transactions and also issue receipts to customers
https://youtu.be/Wy4EvVyo89Q

The final section describes the sales history and data visualization of business transactions in a year, month, day and time.
https://youtu.be/Fu-0pcdXkNg

The following are the tech stack used for this project:
HTML, CSS, Javascript, MySQL, Vanilla PHP, Electron JS and PayStack API as payment gateway.

Web - App

Title - Enemy

This is a mockup of a US based company that sells sunglasses, wallets etc. From the original website, state management was not used hence lack of smooth update of state values. This project tackles that problem hence smooth and rapid update of cart values.

The link below takes you to the first phase of the presentation on YouTube :
https://www.youtube.com/watch?v=YGWkerJYvdQ

The link below takes you to the second phase of the presentation on YouTube with the stripe API implemented to accept credit card payment in the application
https://www.youtube.com/watch?v=Mg-KDyMp5Gs

The following are the tech stack used for this project -
HTML, CSS, Javascript, React JS, Node/Express, MySQL and Stripe API as payment gateway.
